myosin heavy chain, nonmuscle - chicken
N;Contains: myosin ATPase (EC 3.6.4.1)
(S.Species: Gallue gallue (chicken)
C;Species: Gallue gallue (chicken)
C;Accession: A33977; S06116; A43422
C;Accession: A33977; S06116; A43422
C;Accession: A33977; Conti, M.A.; Kawamoto, S.; Preston, Y.A.; Brill, D.A.; Adelstein, R.S. Proc. Natl. Acad. Sci. US.A. 86, 7726-7730, 1989
A;Title: Cloning of the CDNA encoding the myosin heavy chain of a vertebrate cellular my A;Reference number: A33977; MuID:90046668; PMID:2813355

A; Title: Role of the COCH-terminal nonhelical tailpiece in the assembly of a vertebrate A; Reference number: A43422; MUID:92381096; PMID:1512291
A; Recession: A43422
A; Status: nucleic acid sequence not shown; not compared with conceptual translation A; Molecule type: mRNA
A; Residues: 1900-1959 «HOD»
A; Experimental source: brush border
A; Note: sequence extracted from NCBID backbone (NCBIP:111947)
C; Superfamily: myosin heavy chain; myosin motor domain homology
C; Keywords: actin binding; ATP; coiled coil; hydrolase; methylated amino acid; nucleotid F; 847-64/Domain: myosin motor domain homology cMMOT>
F; 174-181/Region: nucleotide-binding motif A (P-loop)
F; 552-565/Region: actin binding #status predicted
F; 837-1277/Region: coiled coil #status predicted
F; 837-1277/Region: S2
F; 1278-1955/Region: 1ight meromyosin

glucosaminyl-(1->2)-alpha-D-mannosyl-(1->6)]-beta-D-mannosyl-(1->4)-N-acetyl-beta-D-glucosaminyl-(1->4)-[alpha-L-fucosyl-(1->6)]-N-acetyl-beta-D-glucosaminyl-(1->4)-[alpha-L-fucosyl-(1->6)]-PATHWAY: Glycosylation.
SUBCELLULAR LOCATION: Type II membrane protein. Membrane-bound sintla trans cisterane of Golgi (By similarity).
SIMILARITY: Contains 1 SH3 domain.
SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 MRAWIGSWRWIMLILFAWGTLLFYIGGHLVRDNDHPDHSTRELSKILAKLERLKQQNEDL

Petit J.-M., Julien R.;

"Ancestral exonic organization of FUT8, the gene encoding the alphac-fucosyltransferase, reveals successive peptide domains which suggest a particular three-dimensional core structure for the alphac-fucosyltransferase family.";

Mol. Biol. Evol. 17:1651-1672(2000).

-- FUNCTION: Catalyzes the addition of fucose in alpha 1-6 linkage to the first Globac residue, next to the peptide chains in N-glycans (By similarity).

Biol. Chem. 271:27810-27817 (1996).

**Le FINCTION: Catalyzes the addition of fucose in alpha 1-6 linkage to the first GlonAc residue, next to the peptide chains in N-glycans. The pH optimum is 7.

**C. -CATALYTIC ACTIVITY: GDP-L-fucose + N(4)-{N-acetyl-beta-D-glucosaminyl-(1-2)-alpha-D-mannosyl-(1-3)-beta-D-mannosyl-(1-3)-beta-D-glucosaminyl-(1-2)-alpha-D-mannosyl-(1-3)-N-acetyl-beta-D-glucosaminyl-(1-2)-alpha-D-mannosyl-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)-(1-3)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (BY

-!- FUNCTION: Required for normal Golgi function (By similarity).
-!- SUBUNIT: Component of the conserved oligomeric Golgi complex which is composed of eight different subunits and is required for normal Golgi morphology and localization (By similarity).
-!- SUBCELLULAR LOCATION: Golgi (By similarity).
-!- SINILARITY: BELONGS TO THE COG5 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      239 SVLNKSPTHNVSKPAPSRGPGKTPOLTTTONPR--AKFWKSLHWLLYDELFBTCTQIKLL

DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEFILDES, CHARACTERISTIC FOR ALPHA-HELICAL COILED COILS.

SIMILARITY: Contains I myosin-like globular head domain.

SIMILARITY: Contains I IQ domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "Cloning of the cDNA encoding the myosin heavy chain of a vertebrate cellular myosin.";

Proc. Natl. Acad. Sci. U.S.A. 86:7726-7730(1989).

-!- FUNCTION: CELLULAR MYOSIN APPEARS TO PLAY A ROLE IN CYTOKINESIS,
CELL SHAPE, AND SPECIALIZED FUNCTIONS SUCH AS SECRETION AND
CAPPING.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gallus gallus (Chicken).

CAPPING.

-!- SUBUNIT.

CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC) AND 2

REGULATORY LIGHT CHAIN SUBUNITS (MLC-2).

REGULATORY LIGHT CHAIN SUBUNITS (MLC-2).

-!- DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEDTAREPIDES, CHARACTERISTIC FOR ALPHA-HELICAL COLLED COLLS.

-!- DISEASE: DEFECTS IN MYH9 ARE THE CAUSE OF MAY-HEGGLIN ANOMALY (MHA), AN AUTOSOWAL DOMINANT MACROTHROMBOCYTOPENIA CHARACTERIZED BY THROMBOCYTOPENIA, GIANT PLATELETS AND LEUKOCYTE INCLUSIONS.

-!- DISEASE: DEFECTS IN MYH9 ARE THE CAUSE OF SECHTWER SYNDROME (FTNS), AN AUTOSOWAL DOMINANT MACROTHROMBOCYTOPENIA CHARACTERIZED BY THROMBOCYTOPENIA, GIANT PLATELETS AND LEUKOCYTE INCLUSIONS.

WITH ADDITIONAL ALPORT-LIKE CLINICAL FEATURES OF SENSORINEURAL DEFENSES; CATARACTS AND NEPHRITIS.

-!- DISEASE: DEFECTS IN MYH9 ARE THE CAUSE OF SEBASTIAN SYNDROME (SBS), AN AUTOSOWAL DOMINANT MACROTHROMBOCYTOPENIA CHARACTERIZED BY TROMBOCYTOPENIA, GIANT PLATELETS AND LEUKOCYTE INCLUSIONS.

-!- DISEASE: DEFECTS IN MYH9 ARE THE CAUSE OF AN AUTOSOWAL DOMINANT FORM OF NONSYNDROMIS SINGERISELED BY PROCEEDSIVE HEARING IMPAIRMENT AND
FUNCTION: CELLULAR MYOSIN APPEARS TO PLAY A ROLE IN CYTOKINESIS
                 CELL SHAPE, AND SPECIALIZED FUNCTIONS SUCH AS SECRETION AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                      SIMILARITY: Contains 1 myosin-like globular head domain. SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Myosin; ATP-binding; Calmodulin-binding; Actin-binding;

-!- FUNCTION: Involved in DNA double-strand break repair (DSBR). The rad50/mrell complex possesses single-strand endonuclease activity and ATP-dependent double-strand-specific exonuclease activity. Rad50 provides an ATP-dependent control of mrell by unwinding and/or repositioning DNA ends into the mrell active site (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SUBUNIT: MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2 HEAVY ELAIN SUBUNITS (WEC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC) AND 2 REGULATORY LIGHT CHAIN SUBUNITS (MLC-2).

DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CYCLES OF A 28-RESIDUR REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES, CHRACTERISTIC FOR ALPHA-HELICAL COLLED COLLS.

SIMILARITY: Contains 1 myosin-like globular head domain.

SIMILARITY: Contains 1 Q domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
